

## Your Solution for SDS & Labels Authoring

ExESS® provides users a comprehensive and globally compliant solution for the authoring of safety data sheets, labels and safety instruction cards. Built on flexible and scalable Microsoft .NET technology, ExESS is user-friendly and can be installed on single workstations, over worldwide corporate networks or accessed and used via the cloud.

### Intelligence

Based on your product properties ExESS determines the Chemical Classification in compliance with 20+ GHS regions thanks to its powerful Calculation Engine.

### Guidance

ExESS Transport Classification Wizard will guide and assist you through the complete compilation of section 14 of your SDS.

### Automation

ExESS utilizes the products classification results to generate blocks of content in line with the hazardous properties of your substances or mixtures; this makes ExESS a unique tool in the market.

### Database

ExESS database is updated daily with the latest regulatory changes available. The updates are being monitored by our experts and integrated in no time.

### Integration

ExESS is so flexible it easily integrates with third-party systems — including but not limited to ERP — thus ensuring the harmonisation and straightforward maintenance of your company data across various platforms.

### Reporting

ExESS' advanced reporting features include multilingual printing in 50+ languages, batch SDS generation in multiple formats (PDF, Word, Odt...), detailed report warnings and high-level documents customisation.

## ExESS Key Features

- ✓ SDS & Labels Authoring

- ✓ Exposure Scenarios
- ✓ Poison Centre Notification

Compliant with  
**20+ GHS Regions**

**Seamless GHS-Compliant SDS  
Authoring**

## Data & Products Updates

Ever-changing regulatory content increases the burden of chemical compliance that's where **ExESS' data & products updates features** offer a key advantage on the market.

The **ExESS delta report feature** draws a comparison of your existing data against the new downloadable version then provides a preview of the update result. This tool helps mitigate risks by allowing to anticipate the impacts of data updates and to make an educated choice when downloading the latest versions of your regulatory lists.

Taking this further, **ExESS' products updates checker** analyses the impact of the recent modifications on your products. You can always assess the potentially-affected products before updating them.
